Freightliner is proud to offer Detroit DT12 Automated Manual Transmissions

How does the Detroit DT12 Transmission assist drivers?

- A pneumatic actuator engages the clutch and shifts the transmission, allowing for faster and smoother gear-shifts compared to electronic actuation.
- Several options of driving modes — depending on terrain and specific applications, including:
 - Performance Mode to climb mountains,
 - Eco Mode for efficient city driving,
 - Creep Mode to improve low-speed maneuverability, making it ideal for backing up to a loading dock or in traffic.
- A true two-pedal system and Shift Lever gives the driver full throttle control to increase acceleration when passing or driving on uphill grades.
- Virtual Technician is a factory-installed onboard diagnostic system that puts you in control of your business 24/7 and takes the guesswork out of power train repair by helping you to manage your business more efficiently.
- DT12 Transmissions come with a 5-year/750,000 mile standard warranty.

At Lonestar Truck Group our experienced sales staff would like the opportunity to explain what this technology means to you and your business. Please give your nearest dealer a call or visit our website at www.LonestarTruckGroup.com
